

CHALLENGE

This client reached out to us recently for a quote to ship their products from QC to US.

It was a rush shipment and they needed it to deliver on a certain date.

SOLUTION

With our network of trusted carriers and distribution centers all over Canada and the United States, we have means to provide our clients towards logistics stability.

This pickup came with different sets of problems; how much of an emergency pickup this was, the ability to deliver within a specific time frame, availability and actual pickup variables.

They handed this to us on a Friday, where everyone is trying to leave earlier than they have to. The pickup and delivery locations were beyond the normal service matrix, and they needed this delivered in a couple of days.

CLIENT PROFILE

Client is a top welding company in North America.

They tasked us to find a solution within the context and variables that they have been given.

Industry: Manufacturing

We reached out to our pool of transportation associates and found the right solution that our client needed.

RESULTS

This particular carrier was recently assimilated to our database and was vetted as a trusted provider.

We finalized the rates, sent over the necessary paperwork and scheduled delivery pickup and time frame.

A shipment that would've taken 3-4 days LTL, 2 days FTL was delivered same day at a fraction of a FTL dedicated delivery. The pickup and delivery went off without a hitch.

Our client was pleased and surprised on how quickly their requirements were met and how quickly the actual transit time was to deliver the shipment.
